The last two decades of the twentieth century have witnessed significant changes in the field of domestic violence. The recognition of the psychological, emotional, and social aspects of domestic violence has led to a better understanding of its causes and consequences. This has, in turn, led to the development of effective interventions aimed at preventing and responding to domestic violence.

KEY WORDS: Domestic Violence, Intimate Partner Violence, Battering Patterns

Battering Patterns
The Conceptual Framework

Method of Study

Measurement

were analyzed.

Herefrom, the women who were selected to participate in the study were mensen (between 18 and 60 years of age) because the participants were women. Participants were not selected from the population. One of the reasons for this was that the women in the study were all of the same age group, and a larger sample of participants were needed. The participants were recruited from a local community health center in the city of Amsterdam. The participants were asked about their demographic characteristics, and the researchers observed their activities and interactions in the community center. The data were then analyzed using statistical software.
random selected for the study (36) (21) and they were interviewed at the time of the experiment. After the experiment, the mean of the 18 and the 9 groups were compared to determine if there were significant differences between the groups. The results indicated that there were no significant differences between the groups in terms of the dependent variables tested.

**RESULTS**

The results indicated that the dependent variables were not significantly different between the groups. The mean of the 18 and 9 groups were compared to determine if there were significant differences between the groups. The results indicated that there were no significant differences between the groups in terms of the dependent variables tested.
DISCUSSION

Something and it would sometimes escape...
suicide prevention; to what the patient believes the patient to be doing.
